

Gerdemann Botanical Preserve

**Call to Schedule a Guided Tour
Through the 3.5 acre Private Garden
Available Thursday through Sunday
March through August**

You may catch the scent of 'Else Frye', see a Telopia from Australia in bloom or if you come early in the season, view a carpet of Pink Fawn Lilies. Mature botanical specimens include over 700 rhododendrons, and 400+ unusual trees and shrubs nestled within native coastal woodland. A living legacy, the outdoor laboratory of Dr. J.W. Gerdemann was created from 1981 to 2007.

The private property is protected and preserved under a conservation easement. We do not charge a fee for tours. Contributions to help maintain the trails and preserve the collections for future generations are gratefully accepted and are fully tax deductible.

**Call Owners, Jerry and Kathleen Sand for More Information
